ZL-7901A Intelligent Temperature and Humidity Controller

Instruction Manual

V2.3

Feature

ZL-7901A is an industrial intelligent temperature and humidity controller. Optional external SSR to realize bigger heating power rate, and with optional temperature PID control. With touch button and big size LCD display, convenient to operate, easy to set up. Applicable for control of incubator, climate chamber, warehouse, and so on.

Main Function

1. Three temperature control modes: relays up/down limit control, SSR up/down limit control, SSR PID control
2. Humidify or dehumidify control
3. Timer air exhaust control
4. Timer egg turning control
5. Illumination control
6. Alarm output
7. Auto restart function
8. Temperature/humidity over limit warning and protection
9. Temperature/humidity sensor fault warning and protection

Specification

◇ Power supply: 100～240VAC, 50 or 60Hz

◇ Output and input:

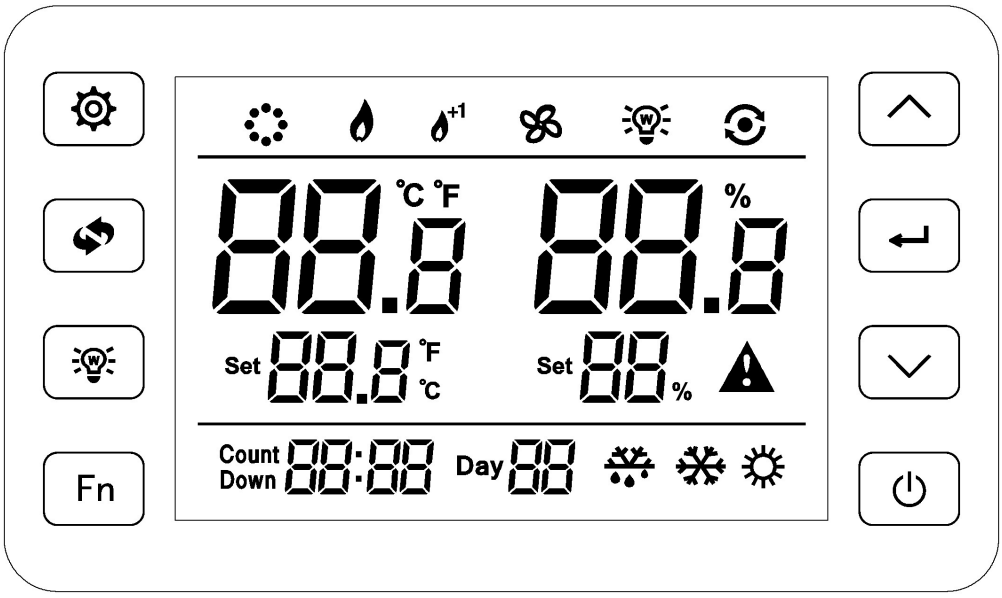
Output					Input
Main heater control relay	250VAC	7.5A	Resistive load	R1	NTC temperature sensor, 5K/3470
Aux heater control relay		7.5A		R2	Humidity sensor SHR04
Humidity control relay		7.5A		R3	
Lamp control relay		7.5A		R4	
Air exhaust control relay		3A		R5	
Egg turning relay		1A		R6/R7	
Alarm output relay		1A		R8/R9	
SSR driver	20mA/10VDC MAX			Y+/Y-	

◇ Setting range: humidity 0～99% RH, temperature 0～100℃

◇ Measuring absolute accuracy before calibration: temperature 1%@25℃, humidity 3%@25℃

◇ Working environment: -20～45℃, 10～90% RH without dewing

Key and Display



Key	Function	Remark
⏻	Power	Keep depressed for 3 seconds to turn online/offline
⚙	Set	Short press to switch between humidity set and temperature set; Long press to set other parameters (see **Parameter Table** below)
∧	+	Increase the set value. Keep depressed for fast set
∨	-	Decrease the set value. Keep depressed for fast set
↵	Enter	Confirmation
↺	Reset	Short press for cancel and return; Long press to clear incubating accumulated days counter
💡	Lamp	Turn the lamp off/on
Fn	Fn	Combination key

Display Remark

Icon	Function	On	Off	Blinking
◌	Humidify/dehumidify state	Energized	De-energized	
🔥	Main heater	Energized	De-energized	
🔥+1	Auxiliary heater	Energized	De-energized

Buzzing

Every key press, there will be a beep.

When there is error of sensors, high/low limit temperature or humidity warning, there will be buzzing warning. Any key press can stop the warning.

Key Operation

Fast Set Temperature (T11), Fast Set Humidity (H20)

Press ⚙ to switch between temperature and humidity setting. Press ∧ and ∨ to set the value.

Press ↵ to save the setting.

Press ↺, or without key operation for 30 seconds, exit the mode, and the set value is not saved.

Parameters Setting

Keep ⚙ and ↵ depressed simultaneously for 3 seconds. LCD shows “Psd 000”.

Press ∧ and ∨ to enter password (default “000”). Press ↵ to confirm.

If the password is correct, enter into parameters setting mode, else exit.

Press ⚙ to select parameter code, press ∧ and ∨ to set the value, press ↵ to save the setting.

Press ↺, or without key operation for 30 seconds, exit the mode, and the set value is not saved.

Parameter Table

Code	Function	Range	Unit	Indication	Default
T10	Temperature control mode (R1, R2, SSR)	0~2		0 = R1 + R2, up/down limit control 1 = External SSR, up/down limit control 2 = External SSR, PID control	0
T11	Temperature set point	T24~T23	℃/℉		37.8
T12	Main (R1) temperature hysteresis	0~20.0	℃/℉	Relative to T11	0.2
T13	Aux. (R2) temperature hysteresis	0~20.0	℃/℉	Relative to T11	0.3
T14	Min stop time for main temperature control (R1)	0~999	sec		1
T15	Min stop time for aux. temperature control (R2)	0~999	sec		1
T16	Min stop time for SSR temperature control	0~999	sec		1
T20	Temperature calibration	-9.9~+9.9	℃/℉		0
T21	High temp. warning relative point	0.1~20.0	℃/℉	Ref.: U20=1/2/3，U30=2/3/4，U40=2/3/4 Hi temp. warning absolute point=T11+T21	0.3
T22	Low temp. warning relative point	0.1~100	℃/℉	Ref.: U40=2/3/4 Low temp. warning absolute point=T11-T22	37.8
T23	Temperature set point up limit	T24~100	℃/℉	The up limit for T11	38.5
T24	Temperature set point down limit	0~T23	℃/℉	The down limit for T11	35
T30	Proportion of SSR PID	0.1~5000	Power/℃	Kp for PID	39.3
T31	Integration of SSR PID	0~5000	sec	Ti for PID. If Ti = 0, shut integration.	15.7
T32	Differential of SSR PID	0~5000	sec	Td for PID. If Td =0, shut differential.	40.5
H10	Dehumidify / humidify mode	0~1		0 = dehumidify, 1 = humidify	1
H20	Humidity set point	0~99	%		50
H21	Humidity hysteresis	0~50	%		5
H22	Humidity calibration	-9.9~+9.9	%		0
H23	Min stop time for humidity control (R3)	0~30	min		0
H24	High humidity warning relative point	1~99	%	Ref.: U20=1/2/3，U30=2/3/4，U40=2/3/4 Absolute point=H20+H24	5
H25	Low humidity warning relative point	1~99	%	Ref.: U40=2/3/4 Absolute point=H20-H25	45
U10	Left turn (R6) time unit	1~2		1 = minute, 2 = hour	1
U11	Left turn (R6) time of the timer	1~999			120
U12	Right turn (R7) time unit	1~2		1 = minute, 2 = hour	1
U13	Right turn (R7) time of the timer	1~999			120
U14	Turning times	0~999		0 = unlimited turning times	0
U16	Turning motor working mode	0~1		0: Either R6 or R7 will be energized. Need position switches, position arrival shuts off the power supply to motor 1: Only energized during turning moment (U17). Manual egg turning support	1
U17	Motor being energized time for every turning	0~999	sec	Effective only when U16 = 1	30
U18	Hatching days	0~99	day	0 = disabled hatching days counting	0

Parameter Table (continued)

Code	Function	Range	Unit	Indication	Default
U20	Air exhaust control mode (R5)	0~3		0 = Air exhaust 1 = Air exhaust + humidity/temperature **high** limit protection 2 = Air exhaust + temperature **high** limit protection 3 = Air exhaust + humidity **high** limit protection	1
U21	Time unit for air exhaust period (R5)	0~2		0 = second, 1 = minute, 2 = hour	1
U22	Air exhaust period (R5)	1~999			30
U23	Time unit for air exhausting time (R5)	0~2		0 = second, 1 = minute, 2 = hour	0
U24	Air exhausting time (R5)	1~999			30
U30	Lamp relay function (R4)	0~4		0 = illumination control 1 = timer switch control 2 = temperature and humidity **high** limit protection 3 = Temperature **high** limit protection 4 = humidity **high** limit protection	0
U31	Time unit for period (R4, when U30 = 1)	0 ~2		0 = second, 1 = minute, 2 = hour	0
U32	Period (R4, when U30 = 1)	1 ~999			120
U33	Time unit for timer's time (R4, when U30 = 1)	0 ~2		0 = second, 1 = minute, 2 = hour	1
U34	Timer's time (R4, when U30 = 1)	1 ~999			5
U40	Alarm relay mode and function (R8, R9)	0~4		0 = alarm output 1 = timer switch control 2 = temperature and humidity **high/low** limit alarming 3 = temperature **high/low** limit alarming 4 = humidity **high/low** limit alarming	0
U41	Time unit for period (R8, when U40 = 1)	0~2		0 = second, 1 = minute, 2 = hour	1
U42	Period (R8, when U40 = 1)	1~999			120
U43	Time unit for timer's time (R8, when U40 = 1)	0~2		0 = second, 1= minute, 2 = hour	1
U44	Timer's time (R8, when U40 = 1)	1~999			5
U90	Password	000~999		000 = no password	0
U93	PID self auto tune power rate	10~100	%	Percent of heater's full power rate	50
End					

Control Function

On/off: Keep ⏻ depressed for 3 seconds to switch between online and offline. The controlling only works when online.

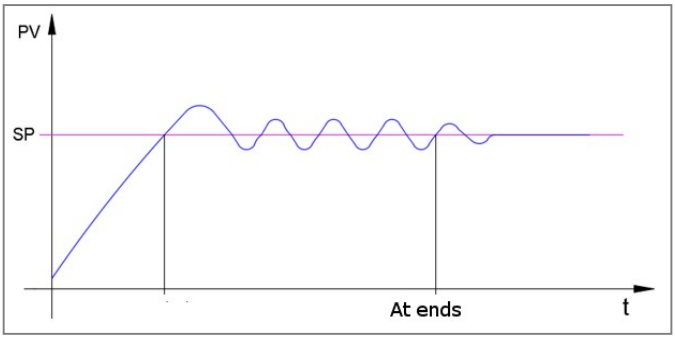
Temperature Control (R1, R2, SSR)

1. **Main temperature control (R1) + Auxiliary control (R2) (T10 = 0)**
   If room temp. ≤ (T11 - T12), and main temp. control (R1) has been stopped for T14, R1 will be energized.
   If room temp. ≥ T11, main temp. control (R1) will be de-energized.
   If room temp. < (T11 - T13), and auxiliary temp. control (R2) has been stopped for T15, R2 will be energized.
   If room temp. ≥ (T11- T13), auxiliary temp. control (R2) will be de-energized.
2. **External SSR hysteresis control (T10 = 1)**
   If room temp. ≤ (T11 – T12), and SSR has been stopped for T16, SSR will be energized.
   If room temp. ≥ T11, SSR will be de-energized.

3. **External SSR PID control (T10 = 2)**

a. PID self auto tune: find the Kp/Ti/Td for specific control object

1. Set U93. If PTC heating element, try smaller value (10~50) to avoid reaching Curie-point, else 50~75.
2. Set SP (T11).
3. Exit set mode, if setting. Keep Fn and ∨ depressed simultaneously for 5 seconds to enter into self auto tune mode: LCD will display "Pid". Press ↵ to start tune. Then LCD will display "At" and start auto tuning.
   When the "At" disappears, the tune finishes, and we get the Kp/Ti/Td, and the controller starts to control based on these parameters.



4. After we get PID parameters (T30/T31/T32), users could set them manually to improve the control result.

b. About PTC heating element

If the heat element is PTC, we must avoid the element inside temperature reaching to Curie-point.
The heater's structure should be like air conditioner's evaporator. Simple aluminum plate style will be fail for PID.
And it needs enough fan speed to make sure the heat element inside temperature not so high.
With U93 = 25~50, if the room could not reach SP, please the lower SP.
If still fail, we have to re-design the heating system, or give up PID.

c. Auto tune with object inside room.

With and without object (such as eggs) inside room, it is not same system for PID.
If auto-tuned PID parameters with blank room are not perfect for room with object inside, we need to auto tune with object inside.
When auto tune with object inside, to not destroy the object (such as eggs), we could set lower SP, and watching the process. If the temperature will be reaching some point (such as 37.8 degree), shut off the controller.

Humidity Control (R3)

Humidify control (H10 = 1)

If room humidity ≤ (H20 – H21), and R3 has stopped for H23, R3 will be energized.
If room humidity ≥ H20, R3 will be de-energized.

Dehumidify control (H10 = 0)

If room humidity ≥ (H20 + H21), and R3 has stopped for H23, R3 will be energized.
If room humidity ≤ H20, R3 will be de-energized.

Egg-turning Control (R6, R7)

Mode 0 (U16 = 0): Either R6 or R7 will be energized, need position switches, manual turning does not work.

When left turning time (U11) arrives, R6 energized, R7 de-energized.
When right turning time (U13) arrives, R7 energized, R6 de-energized.

Mode 1 (U16 = 1): R6 and R7 is not energized when no turning, manual turning works.

When left turning time (U11) arrives, R6 energized for U17.
When right turning time (U13) arrives, R7 energized for U17.

Manual turning:

Keep ∧ and ∨ depressed simultaneously for 3 second to enter into the mode, R6 and R7 will be de-energized, the ● display will be flashing;
If keep ∧ depressed, R6 energized, displayed;
If keep ∨ depressed, R7 energized, displayed;
Keep ∧ and ∨ depressed simutaneously for 3 sec, or no key operation for 30 sec will exit the mode.

Egg turning times:

R6 starts once + R7 starts once = turning once. When egg turning times reaches U14, turning will not start any more.
If turning times (U14) = 0, turning will never stop.

Check *left times of egg turning* and *time to the next egg turning*:

When turning times (U14) ≠ 0, the *left times of egg turning* and *time to the next egg turning* will display alternatively.
When the *accumulated times of egg turning* ≥ U14, LCD will display "STOP", there will be no egg turning.
Keeping depressed for 3 seconds will reset the *accumulated times of egg turning* and *incubation day counter.*
When turning times (U14) = 0, the egg turning will never stop. LCD will display *time to the next egg turning*.

Air Exhaust Control (R5)

Air exhaust mode (U20 = 0)

When U22 arrives, R5 is energized;
When U24 arrives, R5 is de-energized.

Air exhaust + temperature and humidity over limit protection mode (U20 = 1)

When there is no warning, controller works as air exhaust mode (U20 = 0).
When there is high temperature warning (T21) or humidity warning (H24), R5 energized;
When the warning disappears, R5 de-energized.

Air exhaust + temperature over limit protection mode (U20 = 2)

When there is no warning, controller works as air exhaust mode (U20 = 0).
When there is high temperature warning (T21), R5 energized;
When the warning disappears, R5 de-energized.

Air exhaust + humidity over limit protection mode (U20 = 3)

When there is no warning, controller works as air exhaust mode (U20 = 0).
When there is high humidity warning (H24), R5 energized;
When the warning disappears, R5 de-energized.

Lamp Control (R4)

Illumination control mode (U30 = 0): Press to turn the lamp on/off.

Timer switch control mode (U30 = 1): R4 is de-energized during U32, energized during U34, repeatedly.

Temperature and humidity over limit protection mode (U30 = 2)

When there is high temperature warning (T21) or humidity warning (H24), R4 energized;
When the warning disappears, R4 de-energized.

Temperature over limit protection mode (U30 = 3)

When there is high temperature warning (T21), R4 energized;
When the warning disappears, R4 de-energized.

Humidity over limit protection mode (U30 = 4)

When there is high humidity warning (H24), R4 energized;
When the warning disappears, R4 de-energized.

Warning Output Control (R8, R9)

Alarm output mode (U40 = 0)

R8: energized when there is fault, de-energized when no fault;
R9: de-energized when there is fault, energized when no fault.
When temperature or humidity sensor fails, warning output energized. Temperature or humidity control output will be de-energized. Other control outputs keep working.

Timer switch control mode (U40 = 1): R8 is de-energized during U42, energized during U44, repeatedly.

Temperature and humidity over limit protection mode (U40 = 2)

When there is high temperature warning (T21) or humidity warning (H24), R8 energized;
When the warning disappears, R8 de-energized.

Temperature over limit protection (U40 = 3)

When there is high temperature warning (T21), R8 energized;
When the warning disappears, R8 de-energized.

Humidity over limit protection mode (U40 = 4)

When there is high humidity warning (H24), R8 energized;
When the warning disappears, R8 de-energized.

Auto Restart Function

After power supply stops, and then comes back, the controller will run under the same settings before the power supply stops.

Incubation Day Counter

When controlling, the *incubation day counter* will keep counting.
If the counter value reaches U18, controller keeps controlling as normal, and the counter value will be flashing.
If the counter value reaches 99, stop counting. Keeping depressed for 3 seconds will reset the *accumulated times of egg turning* and *incubation day counter.*

Restore to Factory Default Settings

When the controller is online, keep Fn and depressed simultaneously for 3 seconds. The display shows “UnL”. Then press twice, the controller will restore the parameters to factory default settings.

Fahrenheit/Celsius display

Keep Fn and depressed simultaneously for 3 seconds to switch between Fahrenheit / Celsius display.

Manually Checking the Outputs One by One

Keep Fn depressed for 3 seconds, LCD displays “CCC”. Then press twice to enter into manual checking mode. Now all outputs are de-energized. Press and to energize R1/R2/R3/R4/R5/R6/R7/SSR in turn.

Warning Control Instruction (unit in second)

No.	Code	Remark	Real time detection	Delay	Dura - tion	Reset	Action
1	E01	Temperature sensor fault	Yes	0s	6s	Auto	Alarming, temperature output off, the other control not affected
2	E02	Humidity sensor fault	Yes	0s	6s	Auto	Alarming, humidity output off, the other control not affected
3	tHi	Over high temperature warning point	Yes	0s	5s	Auto	Alarming
4	tLo	Lower than low temperature warning point	Yes	0s	5s	Auto	Alarming
5	HHi	Over high humidity warning point	Yes	0s	5s	Auto	Alarming
6	HLo	Lower than low humidity warning point	Yes	0s	5s	Auto	Alarming
7	iCE	Touched IC fault	Yes	0s	5s	Auto	

Attention

1. Please read this instruction carefully. Electrical wiring must be manipulated by certified electrician. Wrong wiring may damage the device and system seriously.
2. Avoid humid environment, or with corrosive gases, or strong electric-magnetic field. The device is possible abnormal in such condition.
3. This product has been strictly tested before shipping. The company warranty is one year, the responsibility is limited to the sale of the product itself. Damage caused by improper usage is not covered by the warranty.
